

**IN THE CLAIMS:**

A status of all the claims of the present Application is presented below:

1. **(Currently amended)** An audio/video (A/V) component networking system, comprising:
  - a source component;
  - a presentation device; and
  - a sink component disposed remote from the source component and adapted to control presentation of A/V program data received from the source component on the presentation device, the sink component adapted to transmit a command to the source component to control streaming display of an A/V menu interface of the source component for display data-stream on the presentation device.
2. **(Original)** The system of Claim 1, wherein the sink component is adapted to decode the A/V program data.
3. **(Currently amended)** The system of Claim 1, wherein the sink component is adapted to enable the user to access [[a]] the A/V menu interface associated with the source component.
4. **(Original)** The system of Claim 1, wherein the sink component is adapted to perform a registration operation to register the source component with the sink component.
5. **(Original)** The system of Claim 1, wherein the sink component is adapted to transfer the A/V program data via a plurality of different types of communication networks.
6. **(Original)** The system of Claim 1, wherein the sink component is adapted to perform a registration operation to register a format of the A/V program data available from the source component with the sink component.
7. **(Original)** The system of Claim 1, wherein the source component is at least one of the group consisting of a satellite receiver component, a digital versatile disk (DVD) component, a cable component, a computer, a video recorder component, and a compact disc (CD) component.

8. **(Original)** The system of Claim 1, wherein the sink component is adapted to perform a registration operation to register the presentation device with the sink component.

9. **(Original)** The system of Claim 1, wherein the sink component is adapted to filter the A/V program data available from the source component based on a format of the A/V program data.

10. **(Original)** The system of Claim 1, wherein the sink component is adapted to filter the A/V program data available from the source component based on a type of the presentation device coupled to the sink component.

11. **(Original)** The system of Claim 1, wherein the sink component is adapted to control a menu function associated with the A/V program data.

12. **(Original)** The system of Claim 1, wherein the sink component is adapted to access an A/V program data library of the source component.

13. **(Currently amended)** An audio/video (A/V) component networking method, comprising:

controlling, via a sink component, presentation of A/V program data received from a remote source component on a presentation device; and

controlling, via a command issued by the sink component to the source component, streaming presentation of an A/V menu interface of the source component for presentation data stream on the presentation device.

14. **(Original)** The method of Claim 13, further comprising performing a registration operation to register the source component with the sink component.

15. **(Original)** The method of Claim 13, further comprising performing a registration operation to register a format of the A/V program data available from the source component with the sink component.

16. **(Original)** The method of Claim 13, further comprising decoding the A/V program data received from the source component.

17. **(Original)** The method of Claim 13, wherein controlling, via a command issued by the sink component, comprises transmitting the command to at least one of the group consisting of a satellite receiver component, a digital versatile disk (DVD) component, a cable component, a computer, and a compact disc (CD) component.

18. **(Currently amended)** The method of Claim 13, further comprising accessing [[a]] the A/V menu interface of the source component via the sink component.

19. **(Canceled)**

20. **(Original)** The method of Claim 13, further comprising filtering the A/V program displayed on the presentation device based on a format of the A/V program data.

21. **(Original)** The method of Claim 13, further comprising filtering the A/V program data displayed on the presentation device based on a type of the presentation device coupled to the sink component.

22. **(Currently amended)** An audio/video (A/V) component networking system, comprising:

means for controlling, via a sink component, presentation of A/V program data received from a remote source component on a presentation device; and

means for controlling, via a command issued by the sink component to the source component, streaming presentation of an A/V menu interface data-stream ~~received from the source component~~ for presentation on the presentation device.

23. **(Canceled)**

24. **(Original)** The system Claim 22, further comprising means for decoding the A/V program data received from the source component.

25. **(Original)** The system Claim 22, further comprising means for registering the source component with the sink component.

26. **(Original)** The system of Claim 22, further comprising means for filtering the A/V program data displayed on the presentation device based on a type of presentation device coupled to the sink component.

27. **(New)** An audio/video (A/V) component networking method, comprising:  
receiving, via a sink component, A/V program data from a remote source component;  
presenting the A/V program data on a presentation device; and  
providing, via the sink component, a real time, automatically updating, menu interface of the source component on the presentation device.

28. **(New)** The method of Claim 27, further comprising:  
receiving an input by the sink component corresponding the menu interface presented on the presentation device; and  
transferring the input to the source component.
